## AUTHORS' NOTE

The hill state of Uttarakhand is a birdwatcher's paradise. With more than 700 bird species being recorded in the state, birding offers opportunities for ecotourism, at minimal impact to the environment. To promote birdwatching, the Uttarakhand Forest Department, with the support of numerous NGO's, initiated the concept of the annual Uttarakhand Spring Bird Festival (USBF) ([www.uttarakhandbirdfestival.net](http://www.uttarakhandbirdfestival.net)). The USBF's byline "Uniting birds, birdwatchers and communities" nicely sums up the objectives of the bird festivals.

For any serious birdwatcher, an authentic bird checklist is crucial. Hence, the authors have periodically been publishing "An Updated Checklist of the Birds Of Uttarakhand" of which there have been three editions published so far. The last version "An Updated Checklist and Bibliography of the Birds of Uttarakhand" was released at the 4<sup>th</sup> Uttarakhand Spring Bird Festival in Nandhaur WLS in 2017.

The 5<sup>th</sup> Uttarakhand Spring Bird Festival will be held at Thano Reserved Forest and Jhilmil Jheel Conservation Reserve from 9<sup>th</sup> to 11<sup>th</sup> March 2018. Located east of Dehradun, 24 km from the Railway Station and 12 km from Jolly Grant Airport, Thano Reserved Forest is an incredible birdwatching location, tucked away in the outskirts of the eastern part of Doon Valley. Set amidst marvelous Sal forest, surrounded by scrub, agricultural fields, crisscrossed by numerous jungle trails, Thano is a haven for birdwatchers and nature lovers with a preliminary bird checklist exceeding 175 bird species. With altitudes varying from 600 m up to 1,200 m, the area offers an opportunity to bird in Sal forests in the lower elevation and mixed broadleaved forests of the lower Himalayas, as one ascends. Some of the birding highlights of Thano include Oriental Pied Hornbill, Red-billed Leiothrix, White-browed Scimitar Babbler, Great Slaty Woodpecker and lots of woodpeckers, amongst other species.

This checklist, "A Preliminary Checklist of Birds of Thano" has been prepared based on the personal observations and records of Raman Kumar, Dhananjai Mohan, Sanjay Sondhi, Suniti Bhushan Datta and Taukeer Alam Lodha ((listed in alphabetical order).

The authors have relied on their personal experience of birdwatching in the state, published literature and credible sightings, photographic or sound records as evidence to prepare this preliminary checklist. Records from eBird (<https://ebird.org>) have also been examined. This checklist is only a

“preliminary” checklist, as long term, systematic avifaunal assessments at Thano have not been conducted. It is hoped that this checklist forms the basis for long-term surveys in the area.

Of the 175 species recorded at Thano, 3 species find a mention in the IUCN Red List of Threatened Species. The IUCN Red List of Threatened Species lists the Great Slaty Woodpecker as “Vulnerable”, the Alexandrine Parakeet as “Near Threatened” and the Steppe Eagle is listed as “Endangered”.

This checklist largely follows the English and Scientific names adopted in “The India Checklist” by Praveen *et al.* (2016). Alternate English Names that are still used in India are also mentioned. Recent taxonomic updates are captured in the “Remarks” column.

We hope this spurs further avifaunal research in Thano.
